SNAKE

<u>Materials needed :</u>
Dice (2-4 depending on complexity of place value)
Smart board or overhead for modeling the game and drawing the game board

<u>Object of the game:</u>
To get your numbers in order from least to greatest or greatest to least within the circles of the snake.

<u>To play:</u>
1. Draw a game board with the number of circles desired (start small for success!) Connect the circles with a line to form a snake.
2. Your opponent draws their game board with the same number of circles.
3. Decide if you are arranging numbers least to greatest or greatest to least along the snake's body starting left to right.
4. Roll the desired number of dice (start with two for success!)
5. Decide how you would like to arrange your dice to create a 2-4 digit number, depending on the number of dice you are using.
6. Place your newly formed number somewhere along your snake's body. Your opponent does the same with their newly formed number on their game board. (These numbers may be the same or different.)
7. Continue rolling the dice and creating numbers, placing them in the appropriate circle along the snake's body until you can no longer place a number. If you cannot place a number, you are out.
8. The winner is the person who can place all numbers within their snake's body in value order.
